

APPENDIX 1 – EQUIPMENT SPECIFICATION

Heat Balance diagram #75V2043-007d

The following elements describe the expected performance for the Equipment.

The « Heat Balance Diagram » defines the power curve in terms of gross electrical output following 3 different curves :

- first one (A curve) describes the nominal value of gross electrical output,
- second one (B curve) describes the maximum value of gross electrical output (peaks),
- third one (C curve) describes the values tested during the performance tests.

The gross electrical output that shall be obtained during the performance tests in order to demonstrate and validate the Equipment performance is, as mentioned in article 10.18 of the main contract : 1097 MW.

Any lower value may lead to the payment of liquidated damages under the contract.

All tests reports demonstrating the expected value must be validated by the independent control authority.
